

# Java Lab1

2018-03-22 (Thu)

## Basic:

Write an Applet program inputs two integers  $x$  &  $y$  from the user by Input-Dialog. Using `drawString()` to show the message below in JApplet.

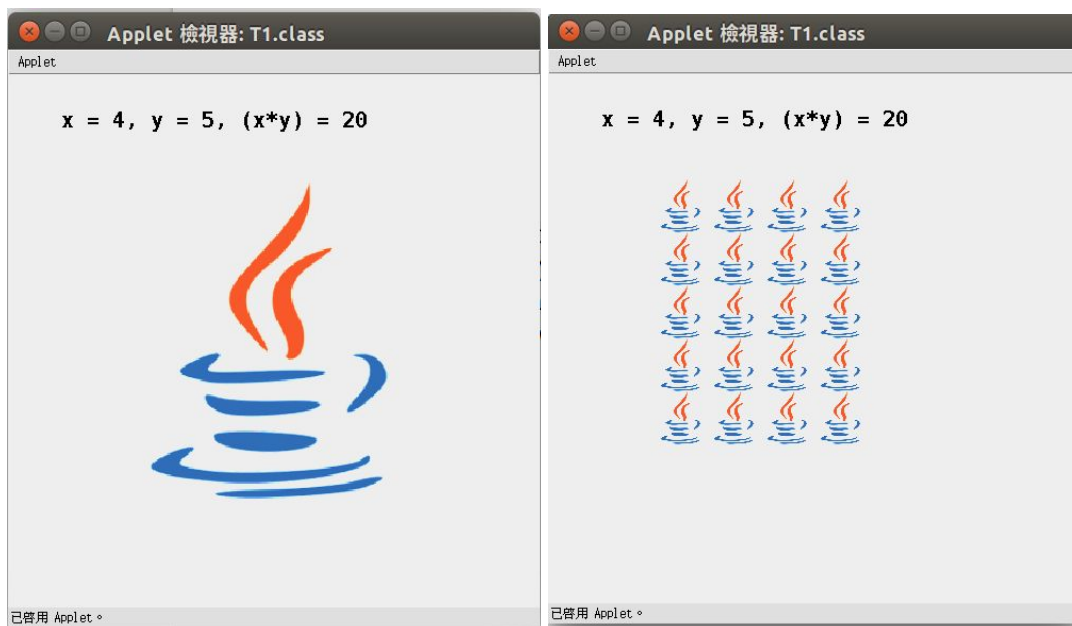

“ $x = ???$ ,  $y = ???$ ,  $(x * y) = ???$ ”

Draw an image (java logo) on the applet, and the image should be loaded from the file. You should write it on the java code, not HTML.

Size of applet: width = 500, height = 500

## Advanced:

Draw  $x*y$  images on the screen,  $x$  images per row,  $y$  rows totally.

**Tips:**

```
import javax.swing.*;  
import java.awt.Graphics;  
import java.awt.*;  
import java.net.URL;  
import javax.imageio.ImageIO;
```

```
JOptionPane.showInputDialog(...);  
Integer.parseInt(...);
```

```
URL my_url = new URL (getDocumentBase(), "xxx.png");  
Image my_image = ImageIO.read(my_url);
```

```
g.setFont(new Font("Courier", 1, 20));  
g.drawString(".....", x, y);  
g.drawImage(img, x, y, width, height, this);
```

**How to run:**

```
> javac Test1.java  
    - Compile Test1.java to Test1.class  
> appletviewer Test1.html  
    - Run applet program
```
